

Postdoctoral Position in Precision Muon Physics: Boston University

The Boston University Intensity Frontier Group invites applications for a postdoctoral position. We have major leadership roles in two Fermilab experiments: The Muon (g-2) experiment, which is nearing the end of construction and will begin commissioning in April 2017; and the muon to electron conversion experiment Mu2e, which is in the middle of construction. A recent, or soon to be awarded, Ph.D. in experimental particle or nuclear physics is required. The initial appointment is for one year, renewable by mutual consent for up to three additional years. Candidates should send a statement of interest, a CV, and have three letters of recommendation sent to Lee Roberts, roberts@bu.edu. Boston University is an equal opportunity employer.
