RTPC Calibration: Drift Paths Extraction
eg6[1.2 GeV run(epass1v9)]

Mohammad Hattawy

March 8, 2013

Following our meeting yesterday, i have changed the simulation with the new beam offset to be $x=0.28\text{mm}$ $y=0.97\text{mm}$: and the performance of the fits for the slices in z as follows: as expected, $\Delta\phi$ is not very sensitive to the shift in x , while it is very sensitive to y . New parameters for the drift paths are needed.
