

Pi0 mass as a function of
uncorrected Energy
(E_raw)

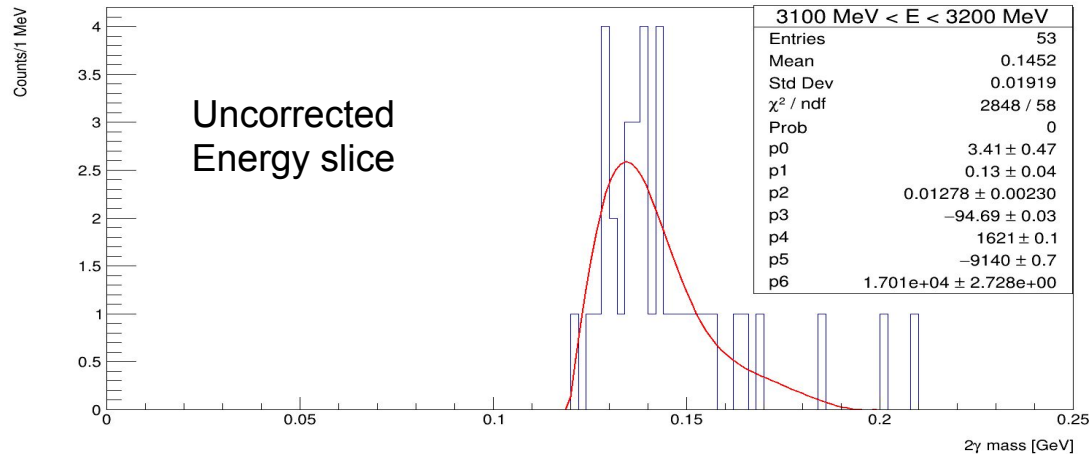

Fit function with anchor at 11 GeV at 0.95

Ratio as a function of corrected Energy. Overcorrection by about a percent. This could be due to SiPM Pixel/count.

3100 MeV < E < 3200 MeV

Example of loss of statistics
after 3.0 GeV

3100 MeV < E < 3200 MeV
