"VERITAS and Recent Results from Cosmic Gamma-Rays"

Karen Byrum
Argonne National Lab

Abstract: In the last two decades, the number of observed GeV to TeV cosmic gamma-ray acceleration sites has increased from a handful of sources to greater than 199 observed in 2017. This has been a result of the current generation of imaging atmospheric Cherenkov telescopes (VERITAS, HESS, and MAGIC) and the science from these instruments has transformed the field. In this talk, I will present recent results in cosmic gamma-rays with an emphasis on VERITAS and future plans in cosmic gamma-rays.

Presentation: **OCNPS 200 @ 3:00 pm**
Refreshments: **OCNPS Atrium @ 2:30 pm**

All interested persons are cordially invited to attend.
