

# Committee Chair Comments/Questions

MOLLER demonstrated the ability to quickly estimate a potential source of systematic error not presented in the CDR (it was **completely** negligible).

MOLLER met the deadlines set in the review process.

The MOLLER collaboration members made clear presentations at the review.

The MOLLER collaboration showed their responses to all the critical design questions (formulated by the committee before the CDR was submitted) early in the review. This allowed the committee members to concentrate on the formulation of homework questions on day 1.

MOLLER responded to all the homework questions.

To Jlab/Director's Reviewers: are we done?
