

10

To do

+

...

Prioritize and schedule this list and assign tasks to people

...

Added by jmammei

Beam background studies either as part of the beampipe optimization or after the pipe is optimized another way

...

Added by jmammei

Design and optimize the central beampipe for He.

...

Added by jmammei

change to He and air in correct regions

...

Added by jmammei

Re-do Yuxiang's decomposition study either to optimize quartz tiles or after optimizing another way

...

Added by jmammei

Optimize quartz tiling for FOM

...

Added by jmammei

Redo spectrometer sensitivity studies for the new quartz locations

...

Added by jmammei

Create translation listing of geometry z positions for main components in old z0 = target to z0 = pivot scheme, and propagate to collaboration and engineering indicating this is the new scheme of referring to detector positions.

...

Added by wdconinc

Move detectors upstream to final position, start referencing to them with their new z position. (Actually keep detectors in same place relative to pivot and move everything else upstream, per other notes).

...

Added by wdconinc

Create a new branch for the z = 0 shift to pivot, check for overlaps, merge into develop, and reproduce current rates to test whether we messed up something.
