

Hall B Run Group C

W. Melnitchouk, A. Accardi

The Run Group C Jeopardy Update involves six approved CLAS12 experiments, scattering polarized electrons from longitudinally polarized protons or deuterons, with inclusive, semi-inclusive (pion, kaon production) or exclusive (DVCS) final states. The motivation for and interest in these measurements remains solid. The expected data are highly anticipated, and will provide valuable inputs into global QCD analyses of PDFs, TMDs and GPDs, such as those being undertaken in 1-D and 3-D studies by the JAM Collaboration at JLab and other global analysis efforts worldwide.
